Why StemGuard?

Every year, thousands of working hours are spent trimming grass around trees – a monotonous and costly task that also risks damaging the trees. A single cut from a trimmer can injure the bark, often leading to the tree dying prematurely and having to be replaced, at a cost of at least €900–3,000 per tree.

StemGuard solves this problem in a simple and sustainable way. It is installed in just a few minutes and becomes a neat and tidy part of the landscape. Thanks to the perforated rings, the inner diameter can easily be adjusted as the tree grows.

With **StemGuard** the trimmer never needs to come near the trunk – eliminating the risk of damage completely.

Working time disappears: in a single season, you avoid spending about 40 minutes per tree on trimming. At an hourly cost of €45, this corresponds to approx. €30 per tree per year. For municipalities, contractors and property managers, this means significantly reduced maintenance costs and a more secure investment in every newly planted tree. For homeowners, it means an easier life – StemGuard protects trees from damage caused by trimmers and lawnmowers.

Key Benefits

- No more trimming around trees
- Prevents bark damage
- Adjusts as the tree grows
- Installed in just a few minutes
- Long-lasting

Economy

Number of trees	Trim time/year	Savings/year
500	333 tim	€15 000
1 000	667 tim	€30 000
5 000	3 333 tim	€150 000

*The calculation is based on each tree taking about 2 minutes to trim per mowing. With 20 mowings per season, that adds up to 40 minutes per tree and year. At an hourly cost of €45, this corresponds to approx. €30 per tree per year.

Do you want to calculate with your own numbers? Try our calculator at www.pekuma.se/stemguard

Installation – step by step

- Place StemGuard around the trunk
- Adjust the inner diameter to the size of the trunk by cutting off as many perforated strips as needed
- Bring the ends together and lock the puzzle joint
- Seal the joint with the included butyl tape that blocks sunlight and keeps StemGuard securely in place year after year

Over time, the undergrowth will disappear, and **StemGuard** will become a natural part of the lawn.
